

Introduction to Omron

BY: YUT

Content

- Create a new project
- Introduction to the interface
- Write your first Omron program
- Exercise

Create a new project

Step 1 : Find the Omron PLC programming software *Sysmac Studio*

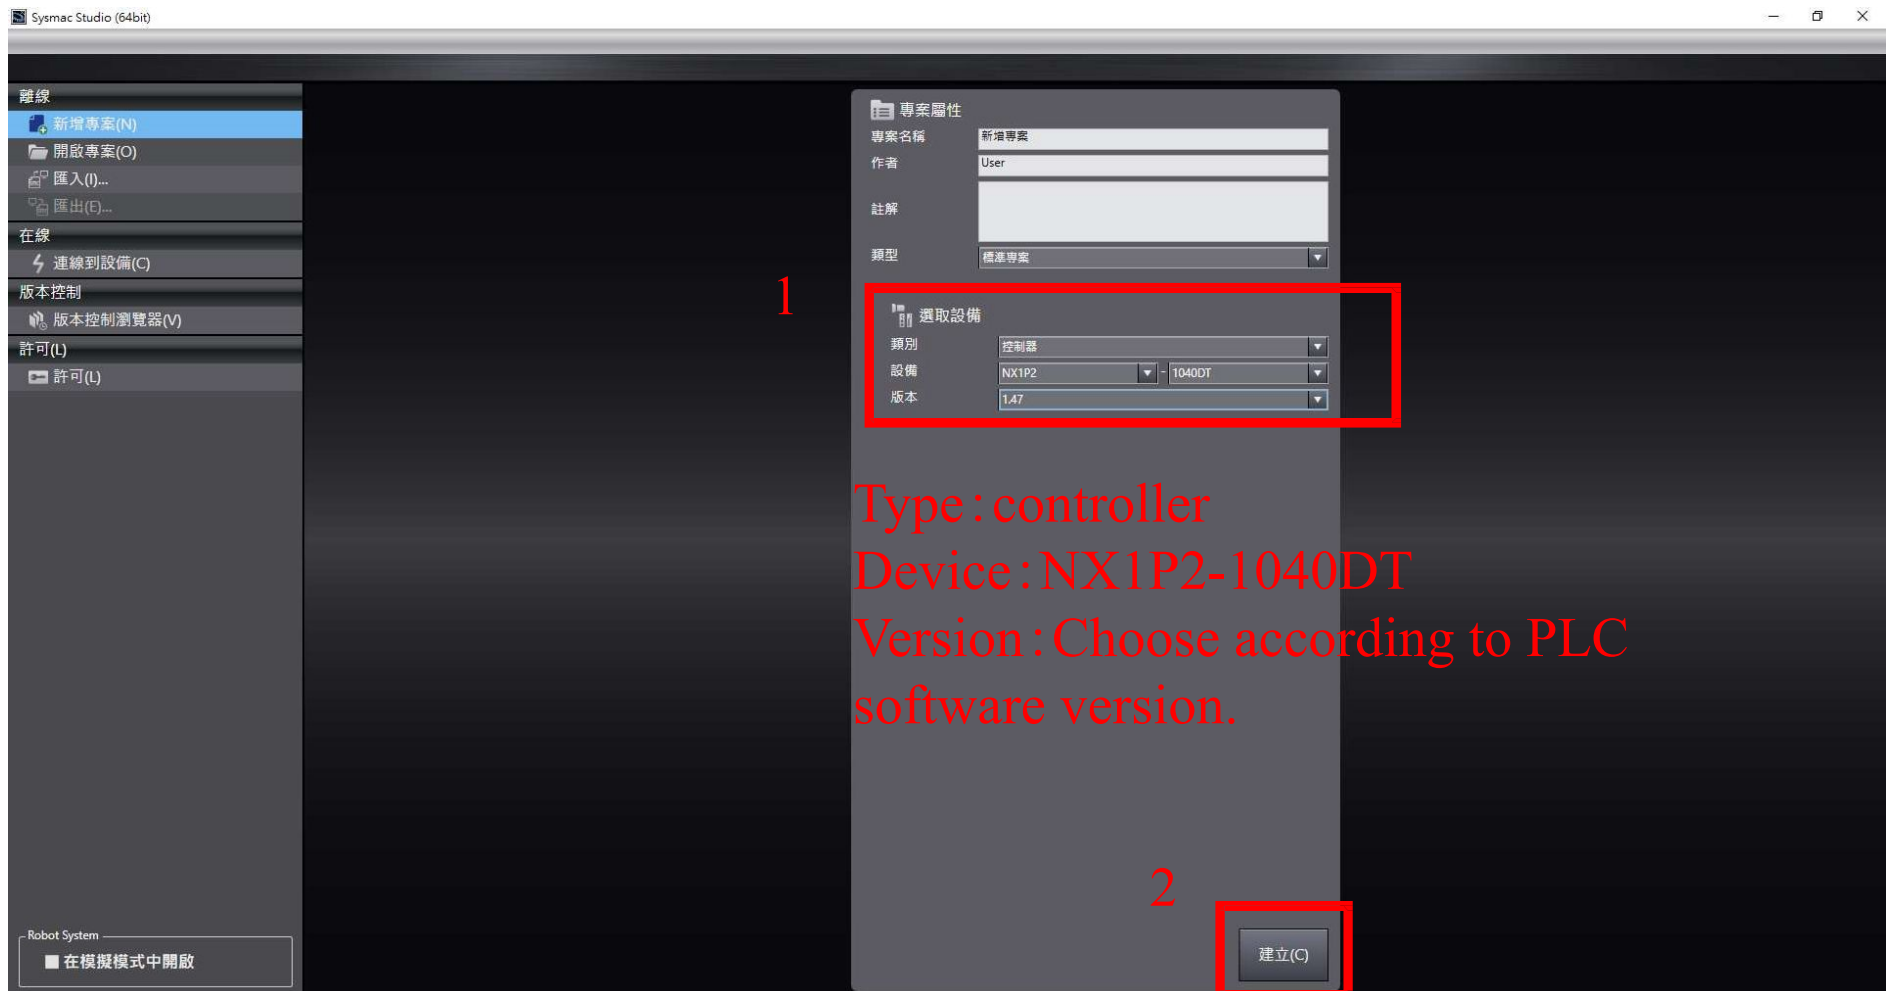

Step 2 : Open *Sysmac Studio* and click on “create a new project”

Create a new project

Step 3 : Create a new project

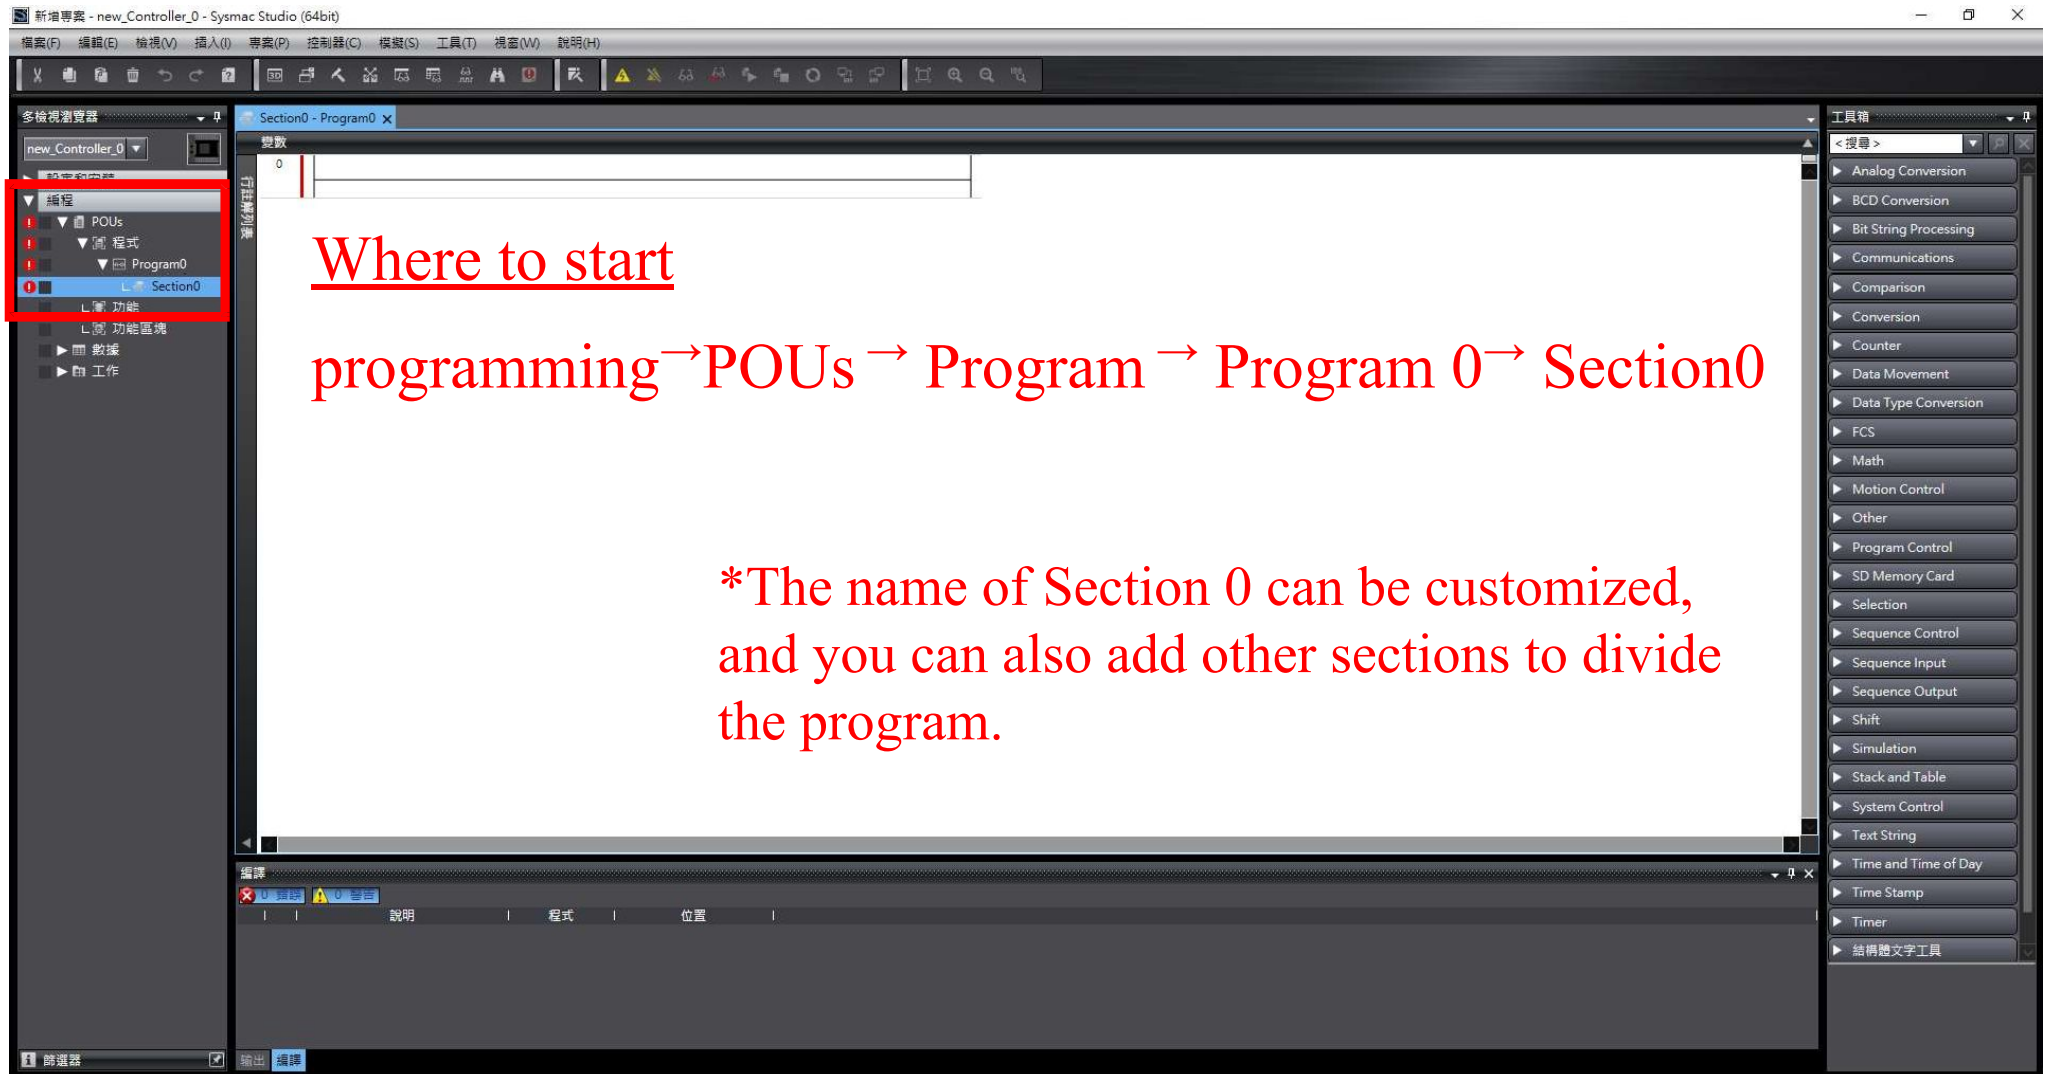

Create new project

Step 4: Finished

Introduction to the interface

Write a program (in Section 0)

Introduction to the interface

External IO setups

Output Bit 08		Output Bit 08	W	BOOL			
Output Bit 09		Output Bit 09	W	BOOL			

4. The variable name can be typed here, either in Chinese or English. Symbols cannot be used. It is recommended to use English.

*These are external inputs and outputs. When practicing electromechanical integration level C, there are sensors and solenoid valves. These are external signal inputs and outputs.

Introduction to the interface

PLC IP setup

1 2 3 4 5

**There are five stations behind the 428 factory. The IP location of each station for the mechanical and electrical integration Level C test question is 192.168.250.X. X indicates the number of the station. Except for the first station, the IP location must be changed, otherwise the PLC IP settings will be lost.

*Subnet masks are all 255.255.255.0

Introduction to the interface

PLC connection-setting domain IP

Introduction to the interface

PLC connection-Setting up the domain IP

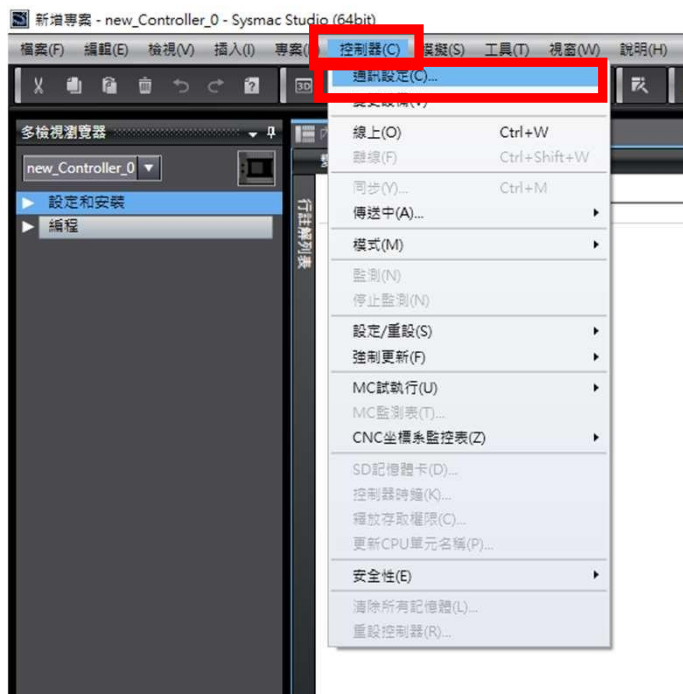

*The last code of the IP address cannot overlap with the PLC, otherwise the PLC will not be connected.

*There is no need to do this on the 428 factory computer because it has already been set up.

Introduction to the interface

PLC connection-configuring the software

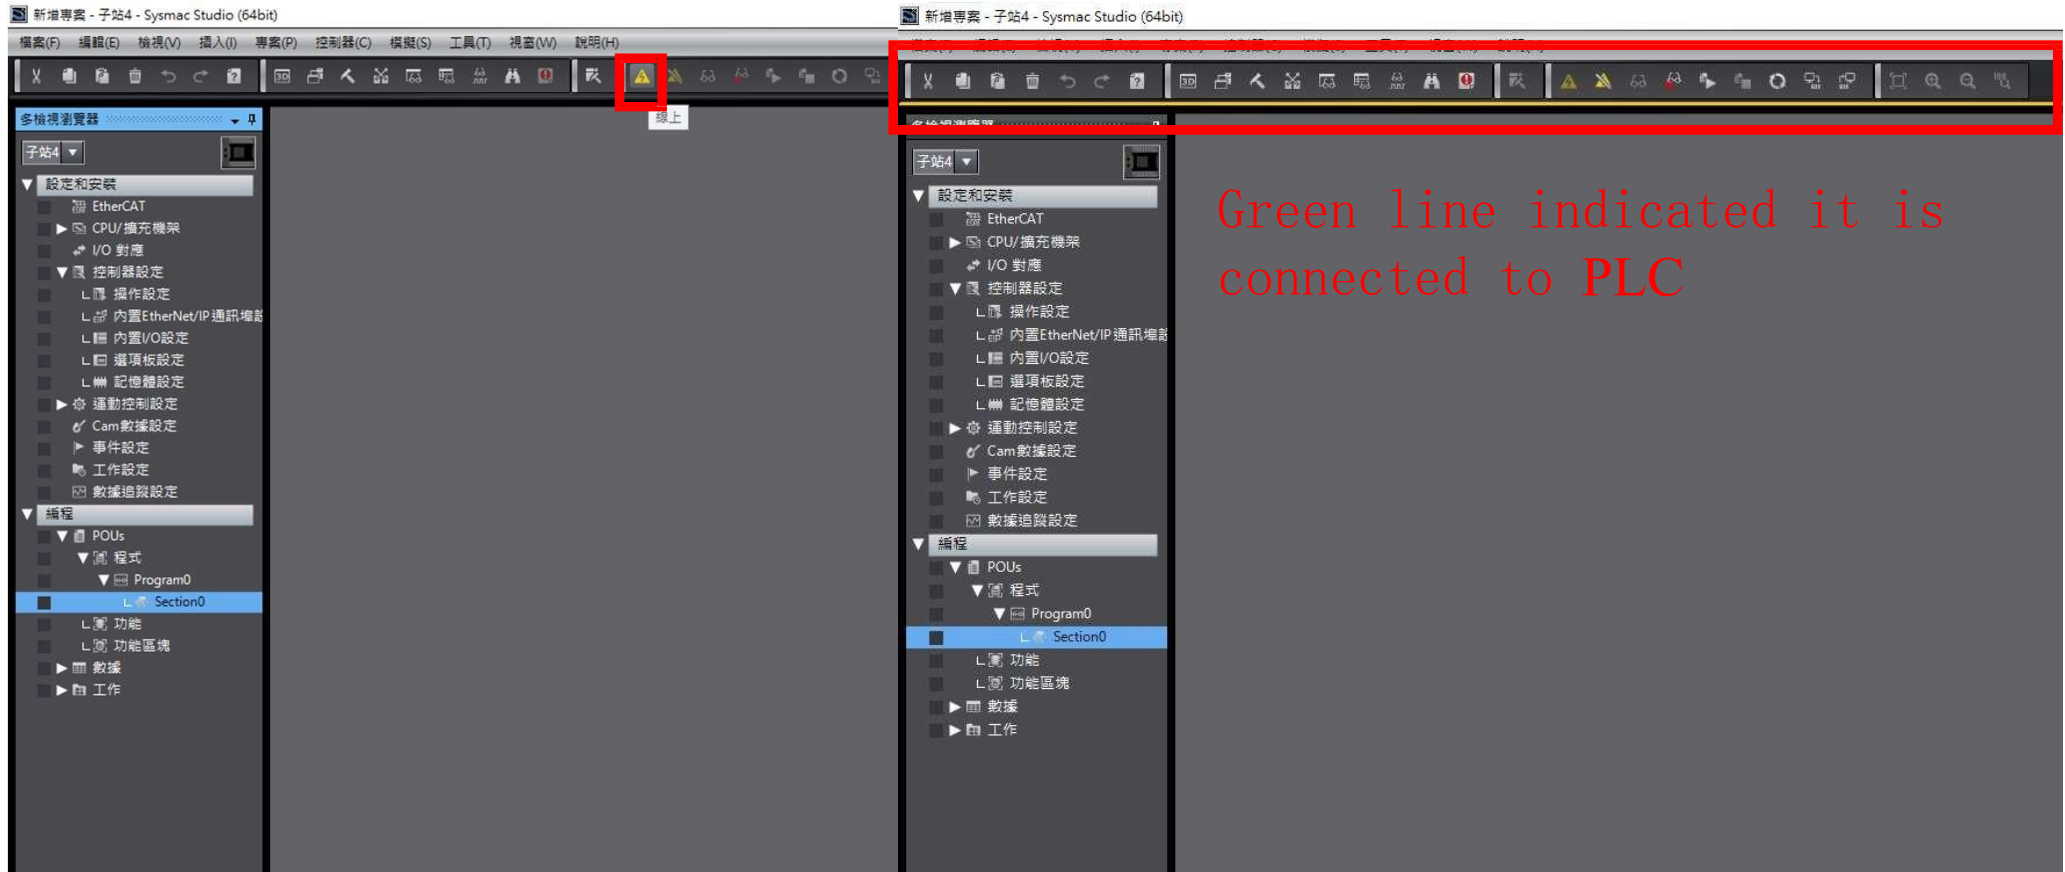

*Enter the correct IP.
192.168.250.X
X indicates the
targeted station

Normal connection will show
that the test is successful.

變數

命名空間 - 使用

內部	名稱	數據類型	初始值	分配到	保持	常數	註解
外部	PB1	BOOL			<input type="checkbox"/>	<input type="checkbox"/>	
	PL1	BOOL			<input type="checkbox"/>	<input type="checkbox"/>	

行註解列表

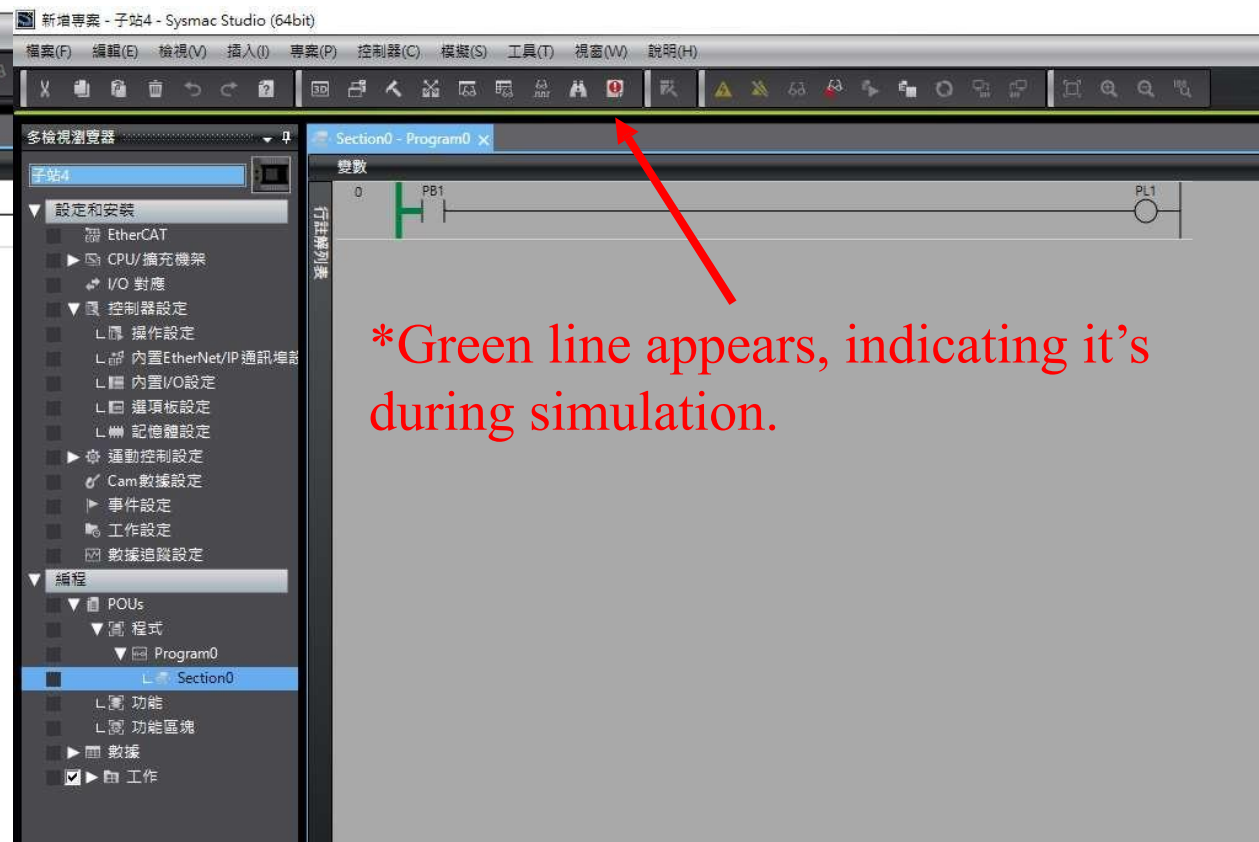

0 PB1 PL1

*PB1 and PL1 are internal variables, not PLC external outputs.

Write your first Omron program

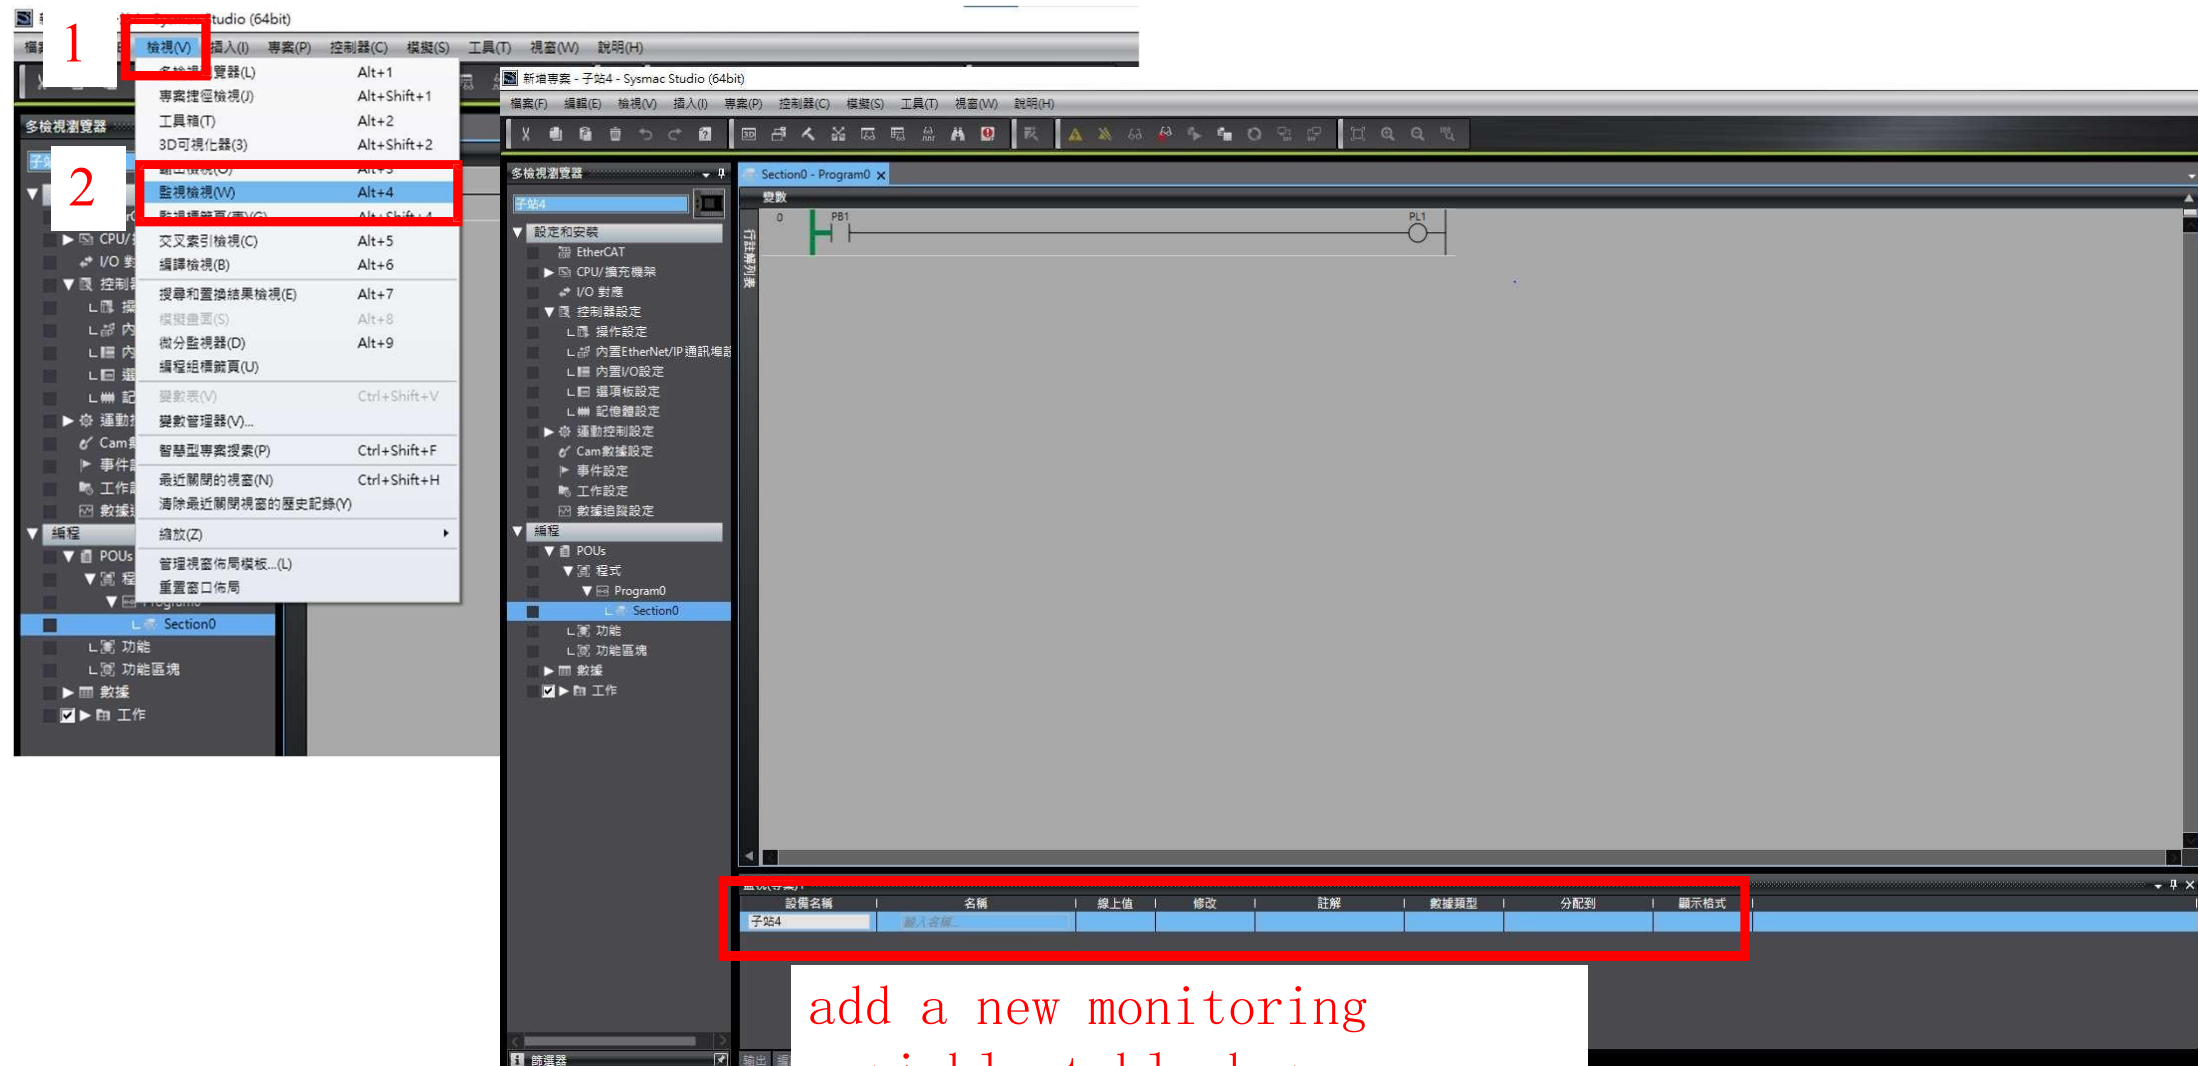

Step4 Simulate programs you write

1

*Green line appears, indicating it's during simulation.

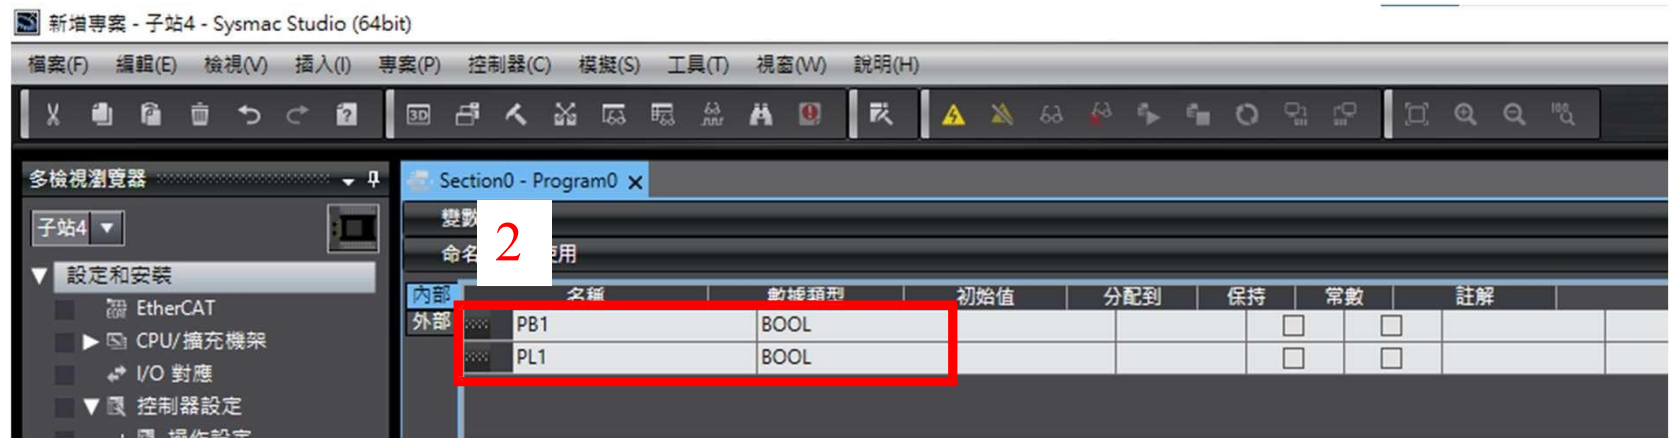

Step5 Add a variable table

```
add a new monitoring
variable table here
```

Write your first Omron program

Step5 add a variable table

*Rules for filling in the names of monitoring variables.

1. Find out under which program is section 0
2. Fill in the internal variables of the section

Write your first Omron program

Step5 Add a new simulated variable table

監視(專案)1							
設備名稱	名稱	線上值	修改		註解	數據類型	顯示格式
子站4	Program0.PB1	False	TRUE	FALSE		BOOL	Boolean ▼
子站4	Program0.PL1	False	TRUE	FALSE		BOOL	Boolean ▼
子站4	輸入名稱						

Accoring to the above mentioned rules, to monitor PB1, you need to fill in:

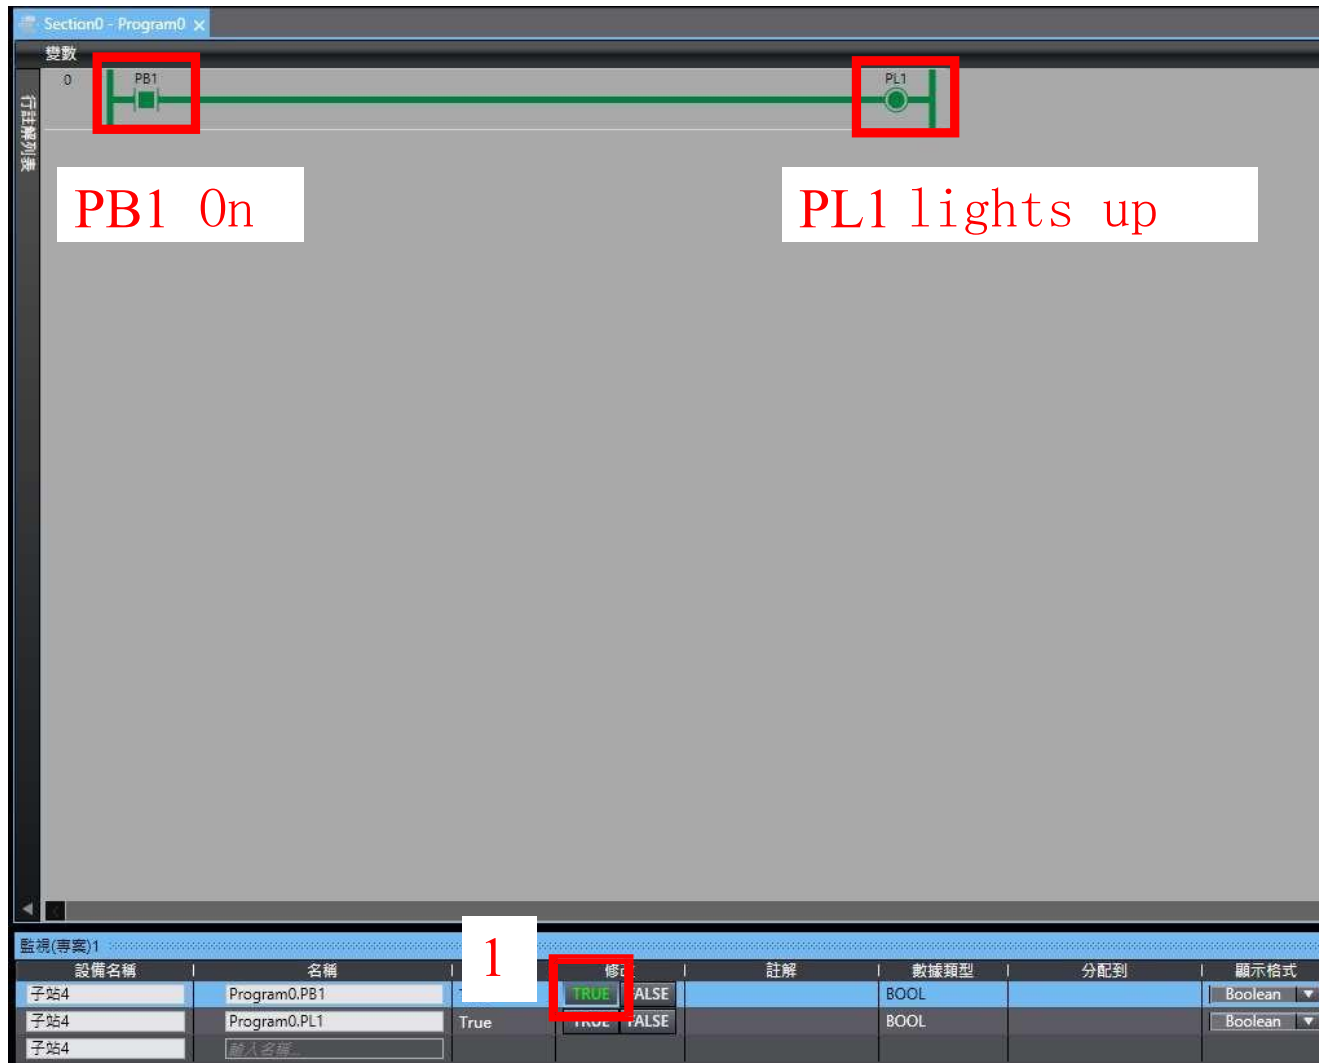

Program0_PB1

↓ ↓ ↓

Program0下 的 internal variable PB1

Write your first Omron program

Step Test the program

Exercise

Exercise 1 Inching and self-holding practice

Hold PB1 → RL lights up → Release PB1 → RL goes out (inching)

Hold PB2 → YL lights up → Release PB2 → YL lights up (self-holding)

Hold PB3 → RL, YL goes out

*How to join points in a segment → Ctrl+ up, down, left, right (direction keys)

1.click this and hold Ctrl

2. use direction key to move here

3.release Ctrl to choose the type of contact to connect

Exercise

Exercise 2 condition
practice

Hold PB1 → RL lights → release PB1 → RL lights up
RL lights → Hold PB2 → YL lights → release PB2 → YL lights up
up
Hold PB3 → RL, YL goes out

*How to join points in a segment

1. click
this and
hold Ctrl

2. use
direction key
to move here

3. release Ctrl to choose the
type of contact to connect

Exercise 3

Convert this circuit diagram into a program
